

MAHAMMADAYAN SAJID BHAI VHORA

Data Analyst | Data Science Intern | Business Intelligence

Borsad, Anand, Gujarat | +91 9714582698 | vhoraayan000@gmail.com

Portfolio: [VIEW PORTFOLIO WEBSITE](#)

PROFESSIONAL SUMMARY

Final-year M.Sc. Data Science student with a Mathematics background and hands-on exposure to data analytics and machine learning. Comfortable working across Python, SQL, Excel, Power BI and Tableau, and genuinely enjoy turning raw, messy datasets into insights that hold up. Built academic projects around predictive modelling, data visualization and recommendation systems, and now looking for an entry-level role in data analytics or business intelligence to keep building on that.

TECHNICAL SKILLS

Programming & Querying: Python (Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn), R, SQL

Analytics & Visualization: Power BI, Tableau, Advanced MS Excel (Pivot Tables, VLOOKUP, dashboards), MS Word

Core Concepts: Statistics & Probability, Exploratory Data Analysis (EDA), Data Cleaning, Data Wrangling, ETL basics, Machine Learning fundamentals, Business Intelligence reporting

EDUCATION

M.Sc. in Data Science (Pursuing, Final Year) — Expected 2027

C.P. and F.H. Shah Commerce College, Sardar Patel University

B.Sc. in Mathematics | CGPA: 6.61 — Graduated 2022–2025

V.P. & R.P.T.P. Science College, Sardar Patel University

Higher Secondary (HSC), 12th | 62% — Gujarat Board, 2022

Secondary School (SSC), 10th | 65.33% — Gujarat Board, 2020

ACADEMIC PROJECTS

House Price Prediction | Python, Pandas, NumPy, Scikit-learn, Matplotlib

- Cleaned a real-estate dataset — handled missing values and outliers before modeling so the downstream analysis wasn't skewed.
- Ran EDA using correlation heatmaps and distribution plots to work out which features actually moved the sale price.
- Compared Linear Regression against Random Forest, checking RMSE and R-squared to see which model performed better.

House Recommendation System | Python, Pandas, Scikit-learn

- Built a content-based recommendation engine that suggests properties based on a user's budget, location and preferred amenities.
- Engineered similarity features from listing attributes and used similarity scoring to rank the closest-matching houses for a given query.
- Structured the pipeline into clear cleaning, feature-engineering and recommendation stages, making it easier to test and reuse later.
